Ex. No: 5 Minimax Algorithm

AIM:

To implement minimax technique using python.

PROGRAM:

```
import math
def minimax(depth, nodeIndex, maxTurn, scores)
    if depth == targetDepth:
        return scores[nodeIndex]
    if maxTurn:
        return max(
            minimax(depth+1, nodeIndex*2, False, Scor
            minimax(depth+1, nodeIndex*2+1, False)
        )
    else:
        return min(
            minimax(depth+1, nodeIndex*2, True, Score
            minimax(depth+1, nodeIndex*2+1, False)
        )
Scores = [-1, 4, 2, 6, -3, -5, 0, 7]
treeDepth = int(math.log2(len(scores)))
optimalValue = minimax(0, 0, True, scores, treeDepth
print("Optimal Value:", optimalValue)
```

RESULT:

The minimax algorithm technique has been implemented successfully and executed.
